Describe all Guarantees (including Design, Efficiency, Process Performance, etc.)		Describe all Special Conditions (including Design/Build, Financing Requirements, Asbestos, Hazardous Materials, Special Warranty Provisions, etc.)	

TYPES OF CONTRACT SURETY BONDS

Bid Bond

Is a bond which provides financial assurance that the bid has been submitted in good faith, that a contractor will enter into a contract at the amount proposed, and will provide the appropriate performance and payment bonds if so required. These bonds are used by obligees (project owners) to pre-qualify contractors that submit proposals.

Performance Bond

A performance bond guarantees performance of the terms of a contract. These surety bonds frequently incorporate payment bonds (labor and materials) and maintenance bonds as part of the contract surety bonding package. Bonding protects the project owner from financial loss should the contractor fail to perform the contract in accordance with its terms and conditions.

Payment Bond

A payment bond guarantees the payment of subcontractors, laborers, and materials suppliers associated with the project. Payment bonds are issued for the protection of those parties that supply labor or materials and to eliminate the likelihood that they will file mechanic's liens against the project property.

Maintenance Bond

A maintenance bond guarantee upkeep (maintenance) of the completed project for a specified period of time after completion. These bonds provide protection for defective workmanship and/or materials.
